Wantace

SPAN FLOORS
NEW DELHI · DUBAI

PROPOSAL · WEBSITE REBUILD

A website that stays up and updates itself.

spanfloors.com moved off WordPress onto a custom build: fast, searchable, fed from Allsy.io, and ready to take your new brand the day the agency finishes it.

PREPARED FOR	Mr. Raymon Chawla
ENGAGEMENT	WordPress → custom build
TIMELINE	3–5 weeks · target 4
INVESTMENT	₹1,10,000 + GST
ISSUED	30 September 2026

Flamecloud LLP · Wantace · nick@wantace.ai

CONFIDENTIAL

FROM THE DISCOVERY CALL

Four problems, and one of them is costing business every day.

You were clear about the order: get the site up and stable first, get the design right second. Everything in this proposal follows that order.

1

The site keeps going down

Down most days, and every hour it is down is an architect or homeowner who cannot see your work. The goal is the least possible downtime, starting with the switch-over itself.

2

No search, no sort

Fifty-plus engineered-wood finishes sit on one long page grouped by tone. Visitors cannot search for “walnut” or filter to herringbone.

3

Two systems to update

Allsy.io already holds every product, project image, tag and brochure PDF in R2. WordPress makes you enter it all a second time.

4

The site must match the work

Your buyers are architects and interior designers with an eye for detail. Forte-level craft, but original, and your brand agency is still at work.

> “I really hate having multiple systems. I never want to update the website directly.”
>
> Raymon Chawla, discovery call. This is the requirement the whole backend is designed around

AGREED ON THE CALL

Backend first, design second: stability before polish.

AGREED ON THE CALL

Wantace designs the first layout, from Forte and the references you showed.

AGREED ON THE CALL

Allsy.io feeds the site through an API you add; we set the format.

AGREED ON THE CALL

Your SEO team reviews the development side before anything goes live.

WHAT WE FOUND ON SPANFLOORS.COM

Two WordPress installs, a plugin stack, and no way to find a product.

2
WordPress installs: the main site and blog.spanfloors.com

95
blog posts on the subdomain, from 2018 to last week

50+
engineered-wood finishes on a single collection page

0
search boxes, sort options or product filters

3
brochures and guides behind form plugins

READ FROM THE LIVE SITE AND ITS SITEMAPS

- **All in One SEO** builds the sitemaps. The post sitemap lists fourteen placeholder posts, **/x/ to /x-14/**. That is noise Google is being asked to index.
- **The blog lives on its own subdomain**, so 95 posts of search value accrue to blog.spanfloors.com rather than to spanfloors.com.
- **Images are served by the same server** that renders the pages, with tone-family grids that load every thumbnail at once.
- **Each collection page carries several embedded form plugins** for samples and brochure downloads.

What we have not diagnosed

We have not had hosting access, so we do not yet know the exact cause of the outages. We are not going to guess at it here.

What we can say is that the rebuild removes the usual causes: a plugin chain, heavy media served from the origin, one shared server doing everything. **On day one, with access, we confirm the cause** and tell you whether anything can be done for the old site in the meantime.

Source: public pages and sitemap_index.xml of spanfloors.com and blog.spanfloors.com, 30 Sept 2026

01 · THE APPROACH

Backend first.
Design when your brand is ready.

Two tracks run side by side. We build the engine and a Forte-inspired layout now, so the site goes live in weeks. Your agency finishes the brand in parallel, and it slots onto the same engine later.

CUSTOM CODE, NO WORDPRESS

ALLSY.IO AS SOURCE OF TRUTH

CLOUDFLARE MEDIA

SEO CARRIED OVER

HOW THE WORK RUNS

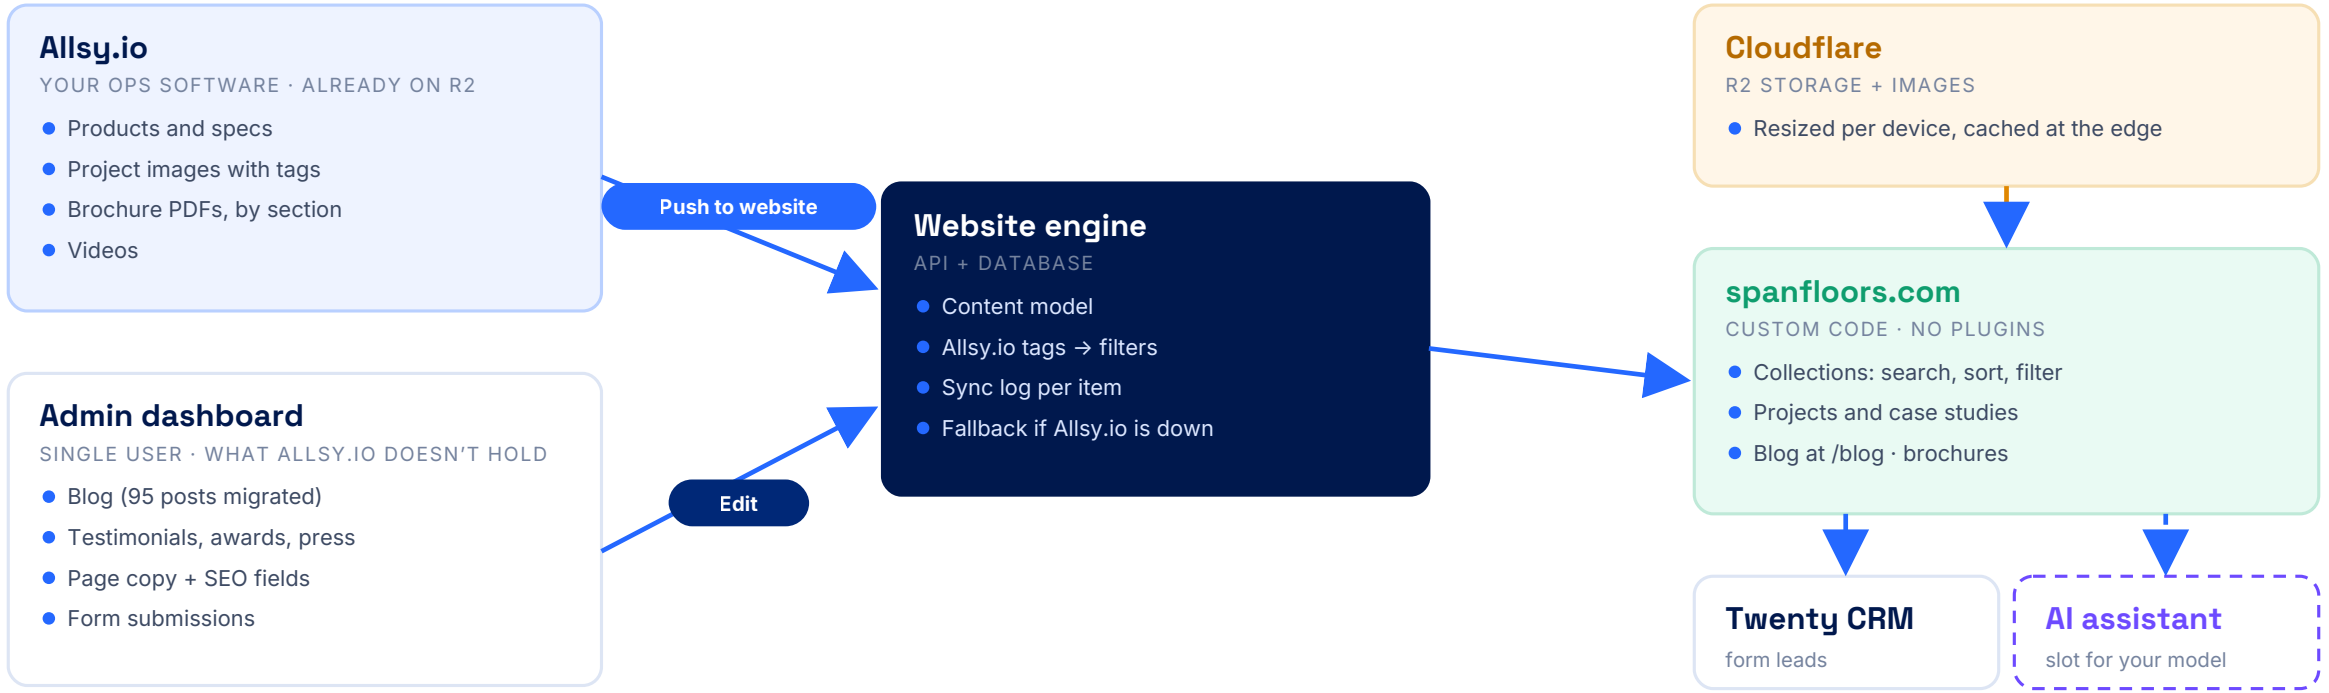

Go live on our layout now. Reskin with your brand later.

Waiting for the agency would keep a failing site online for months. Instead we build a layout from the references you showed us, go live, and treat the agency's design as a reskin: the data, dashboard and Allsy.io sync do not change.

HOW CONTENT FLOWS

Add a project in Allsy.io, press push to website, and it is live.

Allsy.io stays the master

You already record every product, image tag and brochure in Allsy.io. The website reads from it; nobody retypes anything.

You build the endpoint, we write the spec

Allsy.io is your software, so in week one we send the exact API format. You add it and the push button; we build the receiving side.

The dashboard covers the rest

Blog, testimonials, awards and page copy, in a single-user dashboard, which also lets you fix anything by hand if Allsy.io is ever down.

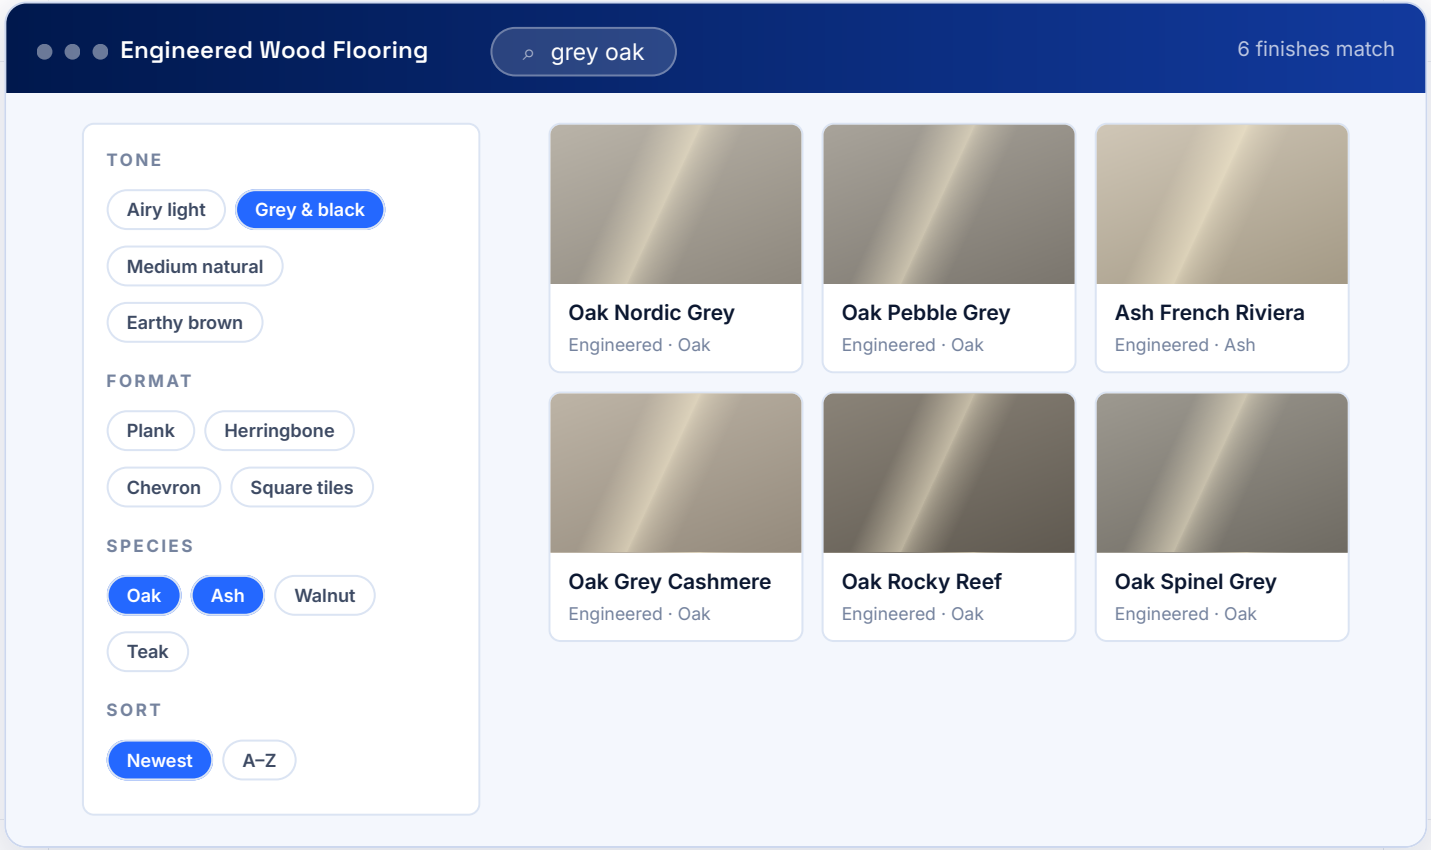

ILLUSTRATIVE SCREEN

Find “grey oak” in two clicks, not a long scroll.

Your tone families become filters, alongside format and species. The filters are driven by the tags you already put on each image in Allsy.io: tag it once, and it is filterable on the site.

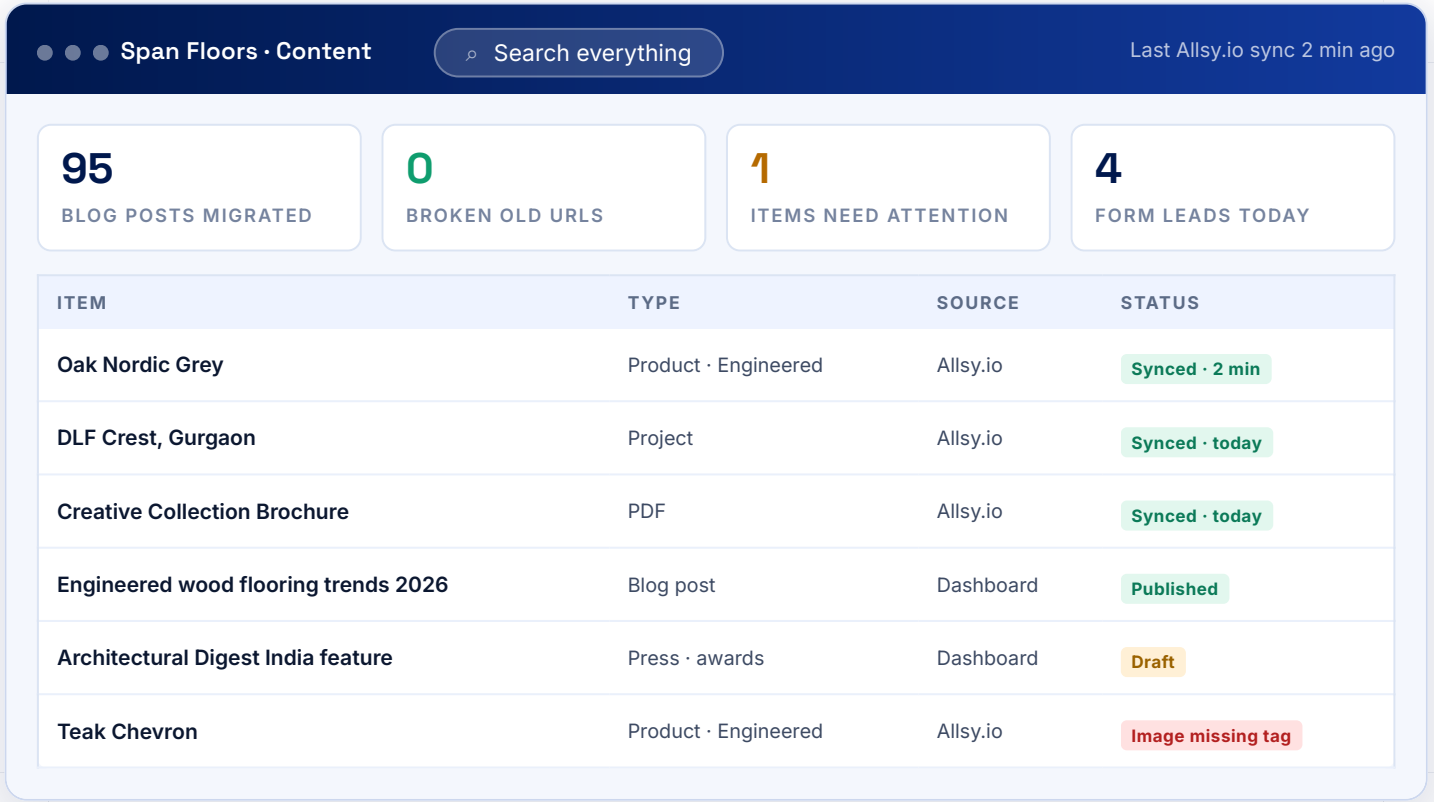

- **Instant search** across every collection, project and brochure
- **Sort and filter** by tone, format, species and collection
- **The sunlight sweep** you liked on Forte, written once in code and applied to every product image, with no per-product video shoots
- **Brochures and samples** requested from the product itself, leads routed to Twenty
- **Images from Cloudflare**, sized for the device, so a 50-finish grid still loads fast

Finish names are from your current Engineered Wood page. Swatches and layout are placeholders until the design rounds.

ILLUSTRATIVE SCREEN

What is live, where it came from, and what needs fixing.

Built for one person

A single admin login, as agreed. No roles and permissions to manage, nothing to train a team on.

- **Source on every row**: Allsy.io or dashboard, so you always know where to make a change
- **Flags, not failures**: an untagged image is flagged, not published broken
- **SEO fields per page**: title, description and share image, editable by your SEO team through you
- **Form submissions** kept here and forwarded to Twenty

Figures on this screen are illustrative, except the 95 blog posts.

EVERYTHING RAISED ON THE CALL

Thirteen things you asked for, and where each one is handled.

#	What you raised	How it is covered	Where
1	“The website keeps going down”	New custom stack cached at Cloudflare’s edge, uptime monitoring, old site stays up until the new one answers	LAUNCH
2	Blogs, products, project images updated regularly	Dynamic content model for products, collections, projects, case studies, testimonials, blog	BACKEND
3	Images in R2 or S3, “future-proof”	Cloudflare R2 + Images; the web server never holds media	BACKEND
4	One system, a “push to website” button	Allsy.io sync on the API you build to our spec; tags carry across	INTEGRATION
5	“We don’t have sort, we don’t have search”	Instant search; tag-driven sort and filter on every collection	FRONTEND
6	Brochures and PDFs get updated	PDF library synced from Allsy.io sections; download from the product	BACKEND
7	The sunlight animation on Forte	Coded once, applied to every product image	FRONTEND
8	Premium, detailed, original, not a copy	Wantace-designed layout from your references, up to 3 revision rounds	DESIGN
9	Awards on the website	Awards and press section (HT, AD India, Zee Business already cited)	FRONTEND
10	Brand agency working in parallel	Their design applied later as a reskin; backend untouched	ADD-ON
11	Maps, forms, landing pages	Studios on a map; forms to Twenty CRM; reusable landing template	FRONTEND
12	“SEO pe impact to nahi aana chahiye na?”	Edge-to-edge content scrape, 301 map, meta carried over, SEO team sign-off	SEO
13	Ask-me-anything assistant	Slot left in the layout; you connect your model when it is ready	LATER

02 · THE BUILD

Every page carried over.
Every ranking protected.

What gets built, how the content and search rankings move across, how the switch-over happens without the site going dark, and what we are choosing not to build yet.

~12 TEMPLATES

95 POSTS TO /BLOG

301 MAP

ZERO-DOWNTIME CUTOVER

PAGES AND TEMPLATES

The same site map you have today, rebuilt as templates.

Template	Serves	Fed by	Type
Home	spanfloors.com	Dashboard	DESIGNED
Audience pages	Homeowner · For Professionals · Become a Partner · Dubai	Dashboard	STATIC
Collection listing	Laminate · Engineered Wood · Cladding & Soffits · Decking	Allsy.io	DYNAMIC
Product detail	Every finish, with images, specs and brochure	Allsy.io	DYNAMIC
Projects + case study	By category, including Pergolas and Gates & More	Allsy.io	DYNAMIC
Blog + post	All 95 posts, moved to spanfloors.com/blog	Dashboard	DYNAMIC
Brochures & guides	Creative Collection · Facades guide · Selection guide	Allsy.io	DYNAMIC
Awards & press	Press features and awards	Dashboard	DYNAMIC
Contact + studios	Sultanpur · Greater Kailash II · Dubai, on a map	Dashboard	STATIC
Landing page	Reusable template for campaigns	Dashboard	REUSABLE

Nothing is rewritten unless you ask

We scrape the current site edge to edge (every heading, paragraph, FAQ, image and alt text) and carry it across word for word. Keeping the words identical is what keeps the rankings stable.

Built on the references you showed us

Forte for structure and the product experience, the premium lighting and flooring sites for restraint and detail. Original, not a copy, with your red kept in the logo.

Custom code, no WordPress

No page builder, no plugins, nothing to patch weekly. Pages are rendered on the server so search engines read them in full.

MOVING WITHOUT LOSING RANK

Your SEO team signs off before a single DNS record changes.

SEO PARITY: INCLUDED IN THIS BUILD

- **Every existing URL mapped**: unchanged where possible, 301-redirected where not
- **blog.spanfloors.com/... → spanfloors.com/blog/...** with a 301 per post, so the blog's authority moves onto your main domain
- **Titles, descriptions and headings** carried over from All in One SEO
- **Clean sitemap and robots.txt**: the /x/ to /x-14/ placeholders dropped, with your SEO team's agreement
- **Structured data** for the organisation, products, articles and studio locations
- **Fast pages**: Core Web Vitals checked on the staging site before launch

Backlinks and content strategy stay with your SEO team. We handle everything on the development side.

1 · Staging on the new stack

Full site, real content, on a private URL.

2 · Review in a shared WhatsApp group

Your SEO team, you and us. Their checklist is worked through on staging.

3 · Switch at a quiet hour

The old site keeps serving until the new one answers. No maintenance page.

4 · Watch for seven days

404 log and Search Console checked daily; any missed URL gets its redirect the same day.

THE REASON FOR DOING THIS NOW

Fewer moving parts, served from the edge.

TODAY

- × WordPress plus a plugin chain on one server, rendering every page on every visit
- × Product and project images served from that same server
- × Form plugins loading on every collection page
- × Two WordPress installs to update and secure
- × Down most days, noticed when someone complains

AFTER THE REBUILD

- ✓ Custom code with no plugins; pages cached at Cloudflare's edge
- ✓ Images from R2 through Cloudflare, sized for each device
- ✓ Forms written into the site, posting to Twenty
- ✓ One codebase for the site, blog and dashboard
- ✓ Uptime monitored every minute, with an alert to us and you

0 plugins
to patch, update or conflict

1 codebase
instead of two WordPress installs

Every 60 s
uptime checked, with an alert

At the edge
pages and images cached by Cloudflare

An honest caveat. Until we have hosting access we cannot tell you why today's site fails. If the cause turns out to be something simple on the current host, we will tell you on day one so the old site can be steadied while the new one is built.

DELIBERATELY NOT BUILDING NOW

What we are leaving out, and why.

Each of these came up on the call. None of them should hold up getting a stable site live.

The agency's custom design

Your brand agency is still working. When their design is ready we quote the reskin separately. It replaces the presentation layer only.

The AI assistant

You are training your own model. We leave a slot in the layout; connecting it later is a small job once your harness exists.

A lead-handling workflow

Serious buyers call or WhatsApp, and that flow already works. Forms simply land in Twenty and your inbox.

Per-product video shoots

The sunlight effect is done in code across every image, so nothing needs filming product by product.

Multi-user roles

One admin login, as agreed. Roles and approvals can be added later if the team that edits the site grows.

A rewrite of your copy

Words are carried over as they are. Rewriting copy during a migration is the fastest way to move rankings.

Everything else on the coverage list is in the price. Anything on this page can be added later as a separate, fixed-price piece of work, on the same engine.

03 · COMMERCIALS

Four weeks of work, two payments.

How we arrived at the timeline, the week-by-week plan, the investment, and what we need from your side to hold the dates.

₹1,10,000 + GST

50% TO START · 50% BEFORE DEPLOYMENT

3–5 WEEKS

WHERE 3–5 WEEKS COMES FROM

37 days of effort across two engineers comes to four weeks.

Work package	Owner	Days
Discovery, host access, content scrape, URL inventory	Backend	3
Design system + Forte-inspired layout, up to 3 rounds	Design / FE	5
Content model, API, Cloudflare R2 + Images pipeline	Backend	4
Admin dashboard (single user)	Backend	5
~12 frontend templates, search, sort, filter, sunlight effect	Frontend	8
Allsy.io sync + push-to-website receiver + tag mapping	Backend	3
Migration: products, projects, PDFs, 95 blog posts	Backend	3
SEO parity: meta, schema, sitemap, 301 map	Frontend	2
Forms to Twenty, studio maps, landing template	Frontend	1.5
QA, performance, staging review, cutover	Both	2.5
Total effort		37

37 days
of effort

÷ 2
engineers in parallel

≈ 19 days
elapsed, four working weeks

3 weeks if
host access and the Allsy.io API arrive in week one, the layout is approved in two rounds, and feedback comes back within a day.

5 weeks if
design rounds stretch or content sign-off waits. If the Allsy.io API slips, launch still goes ahead on the dashboard and sync follows.

WEEK BY WEEK

Live on 30 October. At the outside, 6 November, before Diwali.

End of week 1

First layout for the home and collection pages. You react; round two starts.

End of week 2

Layout signed off. Allsy.io endpoint due from your side.

End of week 4

Staging accepted, completion invoice, then deployment and handover.

Dates are indicative from commencement and move with the start date and with input from your side.

COMMERCIALS

One fixed price for the whole site, frontend, backend and dashboard.

PAYMENT 01 · DEPOSIT

On commencement

₹55,000

50% · with signed quotation · + GST

- Host and WordPress access, content scrape
- Allsy.io API spec delivered to you
- Layout rounds begin in week one

PAYMENT 02 · COMPLETION

Before deployment

₹55,000

50% · once staging is accepted · + GST

- Full site reviewed by you and your SEO team on staging
- Deployed to your domain on receipt
- Source code and access handed over

TOTAL

Fixed, exclusive of GST

₹1,10,000

GST at 18%: ₹19,800 · payable ₹1,29,800

- No licence fee, no per-page charge
- Hosting billed to you by Cloudflare at cost
- Optional AMC after 30 days: ₹11,000 a year

INCLUDED

Up to 3 design rounds

On the Wantace layout, covering fonts, colours, spacing and components.

INCLUDED

30 days of support

Bug fixes and small changes after launch, plus the seven-day SEO watch.

YOURS

Code and data ownership

Deployed on your accounts. You own the code, the database and the domain.

Custom design add-on, quoted separately. When your agency's brand or a Figma design is ready, we quote applying it across the site as a fixed-price reskin. The engine you pay for here does not need rebuilding.

HOLDING THE DATES

Six things from your side, most of them in week one.

1 · Access in the first two days

Hosting, both WordPress admins, the domain registrar and DNS, and your Cloudflare account (or we create one in your name).

2 · The Allsy.io endpoint by end of week 2

Built to the spec we send you in week one, with the push-to-website button.

3 · Layout feedback within 48 hours

One consolidated set of comments per round, from you.

4 · Your SEO team in the loop

A shared WhatsApp group from week one, and their checklist before staging review.

5 · Brand basics

Logo files and any colour or font direction the agency has already settled.

6 · Anything the scrape can't reach

Original brochure PDFs, award certificates and project photos that aren't in Allsy.io yet.

If an input slips, the plan bends rather than breaks. A late Allsy.io API moves sync after launch, not launch itself. Slower design rounds or late access move the dates by the same number of days.

TO START ON MONDAY 5 OCTOBER

Sign this week, and you see your first layout by 9 October.

1

Sign the quotation

Quotation WT/2026-27/SF-01, with the 50% deposit.

2

Share access

Hosting, WordPress, DNS and Cloudflare, so we can diagnose the outages on day one.

3

Open the SEO group

You, your SEO team and us on WhatsApp.

4

First layout review

Home and collection pages, end of week one.

A stable, searchable spanfloors.com, live by 30 October.

Custom-built, fed from Allsy.io, SEO carried over, and ready for your new brand when the agency hands it over.

₹1,10,000 + GST · 50% to start · 50% before deployment

Accepted for Span Floors LLP, Mr. Raymon Chawla

For Flamecloud LLP (Wantace), Mr. Nikunj Dutt, Partner · nick@wantace.ai
